Security Awareness is a set of practices designed to help everyone involved in social engineering and recently "social engineering" practices and mitigate their effects. Under its umbrella, there are certain things that are acceptable to those involved and certain things that are not. While not an exhaustive list, the following are examples of acceptable and not acceptable practices:

- If the practice is a part of an action or mission, it is acceptable. For example, if you are planning an action with the people involved in your operation, it is acceptable to use social engineering techniques.
- If the practice is not a part of an action or mission, it is not acceptable. For example, if you are not planning an action with the people involved, it is not acceptable to use social engineering techniques.

Two Exceptions

- Your plan or someone else's plan.
- Someone else's roadway for a test.
Do not let any of this scare you. If you're a bit of an egghead, you may be more likely to follow the rules, but this isn't a rule book. It's just a guide to help you understand the basics of photography. Photography is all about capturing memories, and there are many different ways to do it. Some people prefer to use cameras, while others prefer to use their smartphones. But no matter what you choose, the most important thing is to have fun and enjoy the process.
